# DIMMERS

For an efficient management of all main types of loads

## NEW UNIVERSAL DIMMER

With the new BTicino universal dimmers it is possible to control and adjust the light intensity of all types of loads on the market, from traditional incandescent lamps, to the latest generation LED and CFL energy saving lamps that, as required by the regulations, will soon replace them.

## INSTALLATION ADVANTAGES:

- thanks to the possibility of managing all kinds of loads, the device may be installed before selecting the lamps
- wiring only requires 2 wires (no neutral wire necessary), saving time during the installation
- as the neutral is not necessary, it can be easily installed in replacement of traditional existing dimmers or controls
- it can be controlled by one or more remote pushbuttons

## COMFORT:

- thanks to the new universal dimmer, it is possible to adjust the light intensity, obtaining the optimum light conditions for each situation
- its ergonomics and the user interface are simple and intuitive, with dedicated pushbuttons for switching on/off, and +/- level adjustment
- a simple touch is enough to switch the light on at a preset level (33% or 66%)

## LIGHT AIR

LIVINGLIGHT AIR features reduced protrusion from the wall of the device/cover plate.

- 3, 4, 7 and 3+3 module installation: traditional BTicino flush mounted boxes (503E), or boxes with minimum depth 50 mm.

### Suggestions:

- new systems: considering the back position of the mechanisms inside the boxes, for masonry walls the use of box extensions is recommended, for better comfort and wiring
- existing systems: check that the depth of the box is at least 50 mm.
