

Comfort

Always in control of your front door

Switching on the lights, turning on the heating, lowering the blinds or controlling your front door – the functions of your Smart Home take over many of your daily tasks. They allow you to do more with less.

Door communication

You are always in control of your front door, no matter where you are, right from your smartphone. Our ABB-Welcome door communication system offers diverse and comfortable functions you can use in combination with your home automation.

Digital assistants

Integrate Amazon Echo or Sonos into your Smart Home and you will benefit from even more comfortable functions.

Blind control

Smart roller blinds in all rooms care for the right light conditions, and this without you having to constantly operate the blinds.

Comfort scenes

Always the right atmosphere – combining and calling up light, temperature and position of the blinds according to your requirements.

Heating and air-conditioning

Our Smart Home devices allow you to easily heat or cool your home, for a perfect room temperature.

Light control

Adjust the lighting automatically to your mood or the time of day.

Philips Hue LED lamps

Integrating Philips Hue LED lamps into our home automation system allows you to give rooms an individual lighting mood.

From the simple control of lights and up to the perfect cinema evening.

Your advantages

- Simple setting of light and comfort scenes
- Easy operation
- Integration of Philips Hue, Sonos and Amazon Echo
- Central or remote control
- Heating according to requirements: depending on the time of day and individually for each room
- Optional time control of blinds

Energy

The easiest way to switch off

When intelligently networked, the energy potential is fully utilized: Our Smart Home systems adapt the heating, lighting and blind control individually to your daily living habits and activate them only when required.

Easy remote control

Always in the know about what is happening at home. Via app you can check at any time whether all the windows are closed or if someone has forgotten to switch off the lights. This makes it possible to maintain control - even while on holiday.

Solar

Efficient use of self-produced solar energy by means of intelligent storage solutions for photovoltaic systems.

Blind control

Automatically operated roller blinds protect against cold in the winter, while in the summer the temperature remains pleasantly cool.

Heating and air-conditioning

Efficient regulation of the room temperature by means of control that is practical and independent of the time of day.

Intelligent saving and controlling of energy

The REACT energy storage system from ABB makes possible the efficient use of stored solar energy for apartment buildings. REACT is available as 3.6 kW or 4.6 kW single-phase inverter with a lithium ion battery that is already installed in the housing and has a capacity of up to 12 kWh. This makes it possible to store the surplus energy that is generated by the photovoltaic system during peak times for later use. This, for example, makes the stored energy additionally usable during periods when there is a higher demand for energy.

To prevent the additional costs from becoming a nasty surprise.

Your advantages

- Optimized energy efficiency due to improved insulation by means of roller blinds that have been moved down
- Smart heating in Eco operation
- Automatic deactivation of the heating when a window is open
- Local operation or remote controlled via app for smartphone and tablet

Safety

Stay relaxed whatever the weather

Are all windows closed and have all lights been switched off? Our Smart Home systems let you keep an eye on your home at all times and reassure you on the move that everything is in top order at home.

Weather station

The weather station records climate data and sends them to your home automation system. As soon as wind starts, the blinds move up automatically. As soon as the sun shines, the blinds move down and protect your rooms against direct sunlight.

Door communication
 With ABB-Welcome you are always in control of your front door, no matter where you are, right from your smartphone.

Overvoltage protection
 Our surge arrester protects your electronic devices and data against overheating. This keeps you relaxed during thunderstorms.

Presence simulation
 Simulate your presence and leave your home feeling at ease. You can easily create scenarios that make your home look alive.

Panic switch
 With just a fingertip on the panic switch your house and garden is bathed in a dazzling bright light. An easy way to ward off uninvited guests.

Movement detector
 Our detection systems with automatic lighting for the internal and external areas make your house and property safer.

Window monitoring
 The window sensors monitor the current position of the window handle and inform you directly if there is a change. A very smart way to protect your home against burglars.

Installing intelligent movement detectors is like giving your home its own eyes and ears.

Your advantages

- Fast activation of emergency lighting
- Storm, rain and wind protection which responds to the weather
- Reliable protection from awnings and blinds against the influence of weather
- A variety of control options
- Call-up of weather data on the smartphone, tablet and display

Simple control from a single source

Via voice control

“Switch on the ceiling lamp in the living room”. The system answers: “Okay. The ceiling light has been switched on.” With the assistance of the intelligent voice control you can control the functions in your house via voice commands. Especially practical when you don't want to get up at the moment.

Via Smart Home panel

The panel is configured with your personal settings and controls all functions in your living area from a central location on the wall. The touch screen is easy and comfortable to operate by swiping or tapping.

**Via Smart Home switch**

The classical operating mode to control your Smart Home is the switch. The modern design of our switches valorises every wall and the switches impress with their pleasant haptics and the hard-wearing user interface. They are available in different designs.

**Via Cloud**

With the aid of the app you gain access to your Smart Home from anywhere. Simply log in to the myBuildings portal, and then most functions can be checked and controlled with the smartphone or tablet via Cloud while travelling.

Our systems

Smarter design of living space

Whether you are moving to a new place, built a new house or undergoing a home renovation. We offer different systems that will help you to make your home more comfortable, valuable and smarter.

**ABB-free@home®**

ABB-free@home® is tailored especially to the requirements of smarter residential buildings and is ideally suited both for new buildings and renovation projects. Blinds, lights, heating, air-conditioning or door communication are easy to control and can be regulated to your personal requirements. The functions can be applied both individually and in combination with others. This means that you can determine the type and the number of functions you wish to control intelligently in the future. You also have the option of retrofitting desired functions at a later point in time.

ABB i-bus® KNX

ABB i-bus® KNX is suitable especially as a solution for new construction in which a high-performance, future-proof and extensible system can be installed. As a global standard, ABB i-bus® KNX is especially flexible: The system offers a constantly growing diversity of modules and can therefore be extended without limits. All functions can also be adapted at a later point in time.

—
The entire diversity of
products to make your
life easier and safer

ABB-Welcome

While our ABB-Welcome door communication system is available as an individual solution, it can, however, also be flexibly combined with ABB-free@home® or ABB i-bus® KNX. The diverse indoor and outdoor solutions provide more safety and comfort around the door of your house.

Smarter Home

Advantages

More than a Smart Home.
We offer you a complete
solution that fulfils all wishes.

Light switches and socket outlets

A piece of design in your interior

Discover the wide range of designs, colours, finishes and functions and find the best solutions with innovative technology. Let modern light switches highlight the individual design of your living space.

Miele

Smarter Home Developer Program

To enable customers to choose from an even greater variety of products in the future, ABB has created the “Smarter Home Developer Program” for developers. The program combines ABB’s core offering with solutions from external partners. This enables planners and electricians to equip smart residential buildings with a diverse range of components from different manufacturers and to operate them centrally using ABB products. ABB offers three different interfaces for networking: Application programming (API), the Connectivity Hub and the software platform mozaïq.

- Easy and quick integration of your products and services with the ABB product- and service-portfolio
- Marketing visibility
- Access to households with integrated smart home solutions
- Possibilities to discuss joint offerings together with ABB
- Global reach using the smart home portfolio of the two brands Busch-Jaeger and ABB

new.abb.com/buildings/developer-program

The mozaïq software platform links end devices with each other. This enables interoperability between cloud-based devices and services - independent of vendors.
